Our mission is to provide progressive and cost-effective solutions to the transportation and industrial sectors while providing safe roadways for pedestrians and motorists. Lafrentz has many long-term contracts with Provincial and Municipal Governments across Western Canada.

An industry innovator, Lafrentz is involved in the entire production cycle of road marking materials. We have an international laboratory team that undertakes research & development. We also manufacture our own proprietary products. We perform on-site application of road marking products, and supply our products directly to a range of companies and government agencies.

LAFRENTZ OFFERS A RANGE OF SERVICES TO THE PUBLIC AND PRIVATE SECTORS:

PAINTED ROAD MARKINGS

The most often-used road marking material, Lafrentz has been applying painted road markings for over 35 years. We specialize in highway painting and are proud to be the largest painting operation in Alberta and British Columbia. Because of our large size and diverse fleet of modern paint trucks and equipment, we're able to respond quickly to every need. Our major painted road marking services include highway line painting, airport markings and line removal.

DURABLE ROAD MARKINGS

For areas that require durability and longevity over painted road markings, Lafrentz manufactures and applies durable road markings. Depending on specific criteria, Lafrentz uses thermoplastic or cold plastic to install surface-applied road markings (for medium durability), inlaid road markings (for high durability) and profiled markings (for high visibility plus additional safety features). Lafrentz is the only Canadian manufacturer of thermoplastics and cold plastics designed specifically for the Canadian climate.

LAFRENTZ ROAD MARKING

QUALITY, INNOVATION & TECHNOLOGY

“ Creativity: We design and install enhanced safety markings for atypical and unique projects. Our customers dream it, and we make it happen! ”

COMMITMENT TO SAFETY

Safety is of the utmost importance to the people at Lafrentz. We live it every day, and are proud to have received the Alberta Roadbuilders and Heavy Construction Association (ARHCA) Safety Award for the following years.

- + 2001 ARHCA Safety Award in the 50,001 to 100,000 hours category
- + 2008 ARHCA Safety Award in the 100,001 to 200,000 hours category

The winner is the biggest employer (as measured by person-hours) in that category with zero lost-time claims, based on statistical information from Alberta Human Resources and Employment.

SERVICES (CONT'D)

SAFETY MARKINGS & SURFACES

On the more creative side, Lafrentz can design and install completely customized safety markings and surfaces. By applying the right design and markings, Lafrentz can enhance safety and visibility in warehouses and industrial settings. We also design and install enhanced safety markings for atypical and unique projects. Our customers dream it, and we make it happen! Anything from multi-coloured crosswalks to dual-coloured lines in custom colours—Lafrentz’s versatility and capabilities shine. We even integrate safety into our marking products themselves by designing and manufacturing special skid-resistant surfaces for problem areas where safety is a special concern.

MANUFACTURING

Lafrentz has extensive in-house manufacturing capabilities, and custom-builds road marking materials for specific product requirements. Our customers tell us what end-result they want, and our team researches and develops the product according to set specifications. With a large research and development team behind us, we’re able to manufacture innovative, unique durable road marking products for both end-users and engineered specifications. All materials can be precisely colour-matched for a custom look.

Markings are not our only focus. Lafrentz can design and manufacture solutions for coating, surfaces and adhesive requirements utilizing the properties of our MMA and thermoplastic base stocks.

“ Markings are not our only focus. If you have a problem - we may have a solution. Try us. ”
